

## Abstract

According to this invention, body fluid sealing members for respectively effectively preventing leakage of body fluids from principal portions of a corpse are prepared as a set, and most of body fluid leakage from a corpse is prevented as a whole by using the set. The corpse body fluid leakage preventing device of the invention includes a syringe (1) filled with a jelly substance (11) including a highly water-absorbing polymer to be inserted into a throat (B) of a corpse, an inserting tube (20) to be inserted into the throat (B) from a nasal cavity (A), a covering member (30) externally fit on the inserting tube (20), a rectum body fluid sealing member (40), and a cotton substance (60) for a mouth.
